

USE OF SUCCINIC ACID DERIVATIVES IN PRODUCING A  
MEDICAMENT INTENDED FOR THE TREATMENT OF INFLAMMATION

SANOFI-SYNTHELABO

Abstract:

A subject-matter of the present invention is  
the use of succinic acid derivatives of general formula  
(I):

(I)

in which:

A represents a phenyl group optionally substituted by  
one, two or three substituents chosen from a halogen or  
a C<sub>1-6</sub> alkyl or C<sub>1-6</sub> alkoxy group; a thienyl, furyl or  
pyridyl or a cycloalkyl having from 3 to 8 carbon  
atoms;

B represents [lacuna] aminobicyclic group which  
consists of a 5- or 6-membered cyclic amino compound  
condensed with a 5- or 6-membered cycloalkyl ring which  
can have one or two unsaturated bonds, with the  
condition that B is bonded to the carbon atom of the  
carbonyl group on the nitrogen atom; each R represents

a hydrogen atom or the R residues are combined together to form a chemical bond;  $R_1$  represents a hydrogen atom, a  $C_{1-6}$  alkyl group or an aralkyl group having from 7 to 10 carbon atoms; when there are geometrical isomers, each geometrical isomer, its E isomers and its Z isomers, its cis isomers and its trans isomers, in the treatment of inflammation.
